

Los Angeles Shutter Co.

ABOUT US / INSTALLATION

Shutters are available in several distinct levels of construction quality, and understanding these differences is critical to your purchasing decision. Variations in construction quality can be found in every part of the shutter panel, from material selection, joints, tension system, hardware, finish and installation. The right quality shutter will last for decades. Our experienced staff will design the installation that will provide you with the most pleasing result possible. Your shutter installation begins when your windows are measured. Whether the shutters are mounted inside the window pocket or outside, or a combination of both, you can be assured all alternatives and designs will be considered.

Since we manufacture from wood, we are capable of custom making any framing strips required. We are not limited to anything. Our installers are all employees and fully trained. We do not sub contract the installation. The entire process is our responsibility and completely under our control. We are known for product quality, but we're also passionate about customer service as well as quick and reliable delivery. Our business thrives on referrals from satisfied customers who order additional shutters or refer us to friends and family.

Los Angeles Shutter Co. employees, working from a state of the art facility, have the design and production expertise, along with their know-how and interest to produce the finest quality product for your home. All shutters carry a lifetime warranty on installation, and a full ten year warranty on all structural components and workmanship.
